Amazon India Sales Analytics

Business Intelligence Project Report

Prepared from the supplied Amazon India dashboard brief and sales data extract.

KPI	Result
Total Sales	■1,410,494.02
Total Profit	■241,346.92
Total Orders	99
Units Sold	242
Average Order Value	■14,247.41
Profit Margin	17.1%
Return Rate	7.1%
Cancellation Rate	8.1%

1. Project objective

Build a simple management dashboard to monitor overall sales and profit, category and product performance, order outcomes, payment and fulfillment channels, and geographic performance.

2. Data preparation

The supplied Google Sheets HTML export yielded 99 order records with 17 fields. Order dates were parsed as dates; rupee-formatted unit price, sales, and profit were converted to numeric INR; discount percentages were converted to decimal percentages. No outside data was added.

3. Key observations from this extract

• Highest-sales category: Electronics & Mobiles (■1,150,437.97)

• Highest-sales product in the top-10 ranking: 5G Smartphone (■402,682.68)

• Highest-sales state: Karnataka (■352,362.06)

• Highest-sales payment method: UPI (■825,963.95)

• Highest-sales fulfillment method: Amazon (FBA) (■974,093.26)

4. KPI definitions

Metric	Definition
Average Order Value	Total Sales ÷ distinct Order_ID count
Profit Margin	Total Profit ÷ Total Sales
Return Rate	Returned orders ÷ distinct Order_ID count
Cancellation Rate	Cancelled orders ÷ distinct Order_ID count

5. Limitations and next steps

This is a small supplied extract, not a verified full Amazon India dataset. Sales and profit values are accepted as supplied. Validate source totals before using the dashboard for business decisions. In a production dashboard, add a date/category/state slicer, data refresh process, and documented treatment of returned/cancelled order revenue.
